Hello,

Hmmm, and why do you think such packet (vzctl-template) exists? I've never heard bout it. As far as I know on debian you can use precreated OS template caches (http://openvz.org/download/template/cache/) or create template cahces by yourself (http://wiki.openvz.org/Debian_template_creation http://wiki.openvz.org/Gentoo_template_creation etc)

HTH,
Vasily
