When I try to add a bonding device to a guest, I get this:

```
# /usr/sbin/vzctl set 114 --netdev_add bond0 --save
Saved parameters for VE 114
# /usr/sbin/vzctl start 114
Starting VE ...
VE is mounted
Unable to add netdev bond0: Invalid argument
VE start failed
Stopping VE ...
VE was stopped
VE is unmounted
```

Kernel is kernel-2.6.20-ovz005.1 on x86_64, and vzctl is
vzctl-3.0.16-1. The OS is Fedora Core 6.
