Subject: vzctl create --root and vzyum and get_veid

Hello !

If I create a virtual machine with the following command:

vzctl create 101 --ostemplate ... --config ... --root /a/b/101

then the following command fails:

vzyum 101 install ...

I have modified the function 'get_veid()' into the file '/usr/share/vzpkg/functions' replacing the string 'get_vz_var' with 'get_ve_var' and vzyum works correctly.

I am not sure if this is a bug or my misuse of commands.

Bye
