---

Everything available on downloads w/o RPM as well.

Take this patch: <http://download.openvz.org/kernel/branches/2.6.18/028stab031.1/patches/patch-ovz028stab031.1-combined.gz>  
and apply on mainstream 2.6.18 kernel downloaded from kernel.org from here:  
<http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar.bz2>

the problem in config only  
take your debian/ubuntu config, put it as .config and run:  
# make oldconfig

then select all OpenVZ options as described [http://wiki.openvz.org/Kernel\\_configuration](http://wiki.openvz.org/Kernel_configuration)
