Hi,

I no longer own the domain, was left to expire as the company became bigger and registered as a limited company. We still use OpenVZ but do not use the ZPanel module originally created. We have implemented said code within our own site. I will look for 'ZVDS.ZIP' on my Download servers (I'm not one to delte anything I or the company makes) if not i shall try my best to pull the ZVDS control panel we have implemented into our own site, remove the garbage and i will post it as a seperate control panel.

Kind regards,
Harrison Spink
