This is definitely a bug in vzctl; thanks for catching this, and sorry for spotting this!

See bug #100; you can add yourself to Cc: for this bug to track its progress -- it should be fixed in the next vzctl release.

For now, you should change
if [-f \$VE_CONFFILE]; then
to
VE_CONFFILE=/etc/sysconfig/vz-scripts/\${VEID}.conf
if [-f \$VE_CONFFILE]; then
in both vps.mount and vps.umount scripts. I.e. you should add a single line (VE_CONFFILE=...) to the both scripts.
