Well, seems that's not just leaving the dirs but the vps running

```
[root@awknet01 ~]# vzlist
```

```
Unable to open /etc/vz/conf/100001.conf: No such file or directory
```

```
Unable to open /etc/vz/conf/100002.conf: No such file or directory
```

VEID	NPROC	STATUS	IP_ADDR	HOSTNAME
100001	1	running	-	
100002	1	running	-	

How do you guys sugest to stop those vps?

vzctl stop xxx don't work since there are 1 process in /vz/lock
