Debian etch 2.6.18-028stab021

#dovecot --version
1.0.rc15

dovecot: 2007-06-23 17:53:51 Error: auth(default):
net_connect_unix(/var/run/dovecot//auth-worker.11920) failed:Cannot allocate memory
dovecot: 2007-06-23 17:54:19 Error: pop3-login: Can't connect to auth server at default: Cannot allocate memory

Quote:the only plausible reason for "Cannot allocate memory" is that the kernel is really running out of memory and for this reason, I'm closing the bug report.
