Quote:we have experimental grsecurity patch on top of 2.6.18 stable OVZ kernel, but it is unstable and I'm not sure will become stable one day... :/

Hmm, not to optimistic. Can you elaborate a bit as to why you feel it will not be stable one day. I am understanding if one wants to provides various chroot protection and other aspect to kernel security GrSecurity like solutions would be essential to be patch in the kernel. Also, if it can't be supported in a stable way are there other options besides GrSecurity?

Joe
