uname -a

Linux HOSTNAME-OMITTED 2.6.18-ovz028stab035.1-smp #1 SMP Sat Jun 9 12:09:51 MSD  
2007 x86\_64 x86\_64 x86\_64 GNU/Linux

rpm -qa |grep ovz

ovzkernel-2.6.18-8.1.4.el5.028stab035.1

ovzkernel-PAE-2.6.18-8.1.4.el5.028stab035.1

kernel-smp-2.6.18-ovz028stab035.1

I followed the instructions from the wiki and after finishing the instructions I found another set of work around instructions for dealing with x86\_64. I did not compile them myself I used yum to fetch them from the openvz repository.

Thanks
