Subject: sysctl.conf ip_forward = 1 changes after reboot

I have set net.ipv4.ip_forward = 1 in my sysctl.conf file. After a reboot it changes back to 0.

I then need to run; echo 1 > /proc/sys/net/ipv4/ip_forward, to set it back to 1.

Any ideas what can be done to make the change permanent? I'm running CentOS 5 with APF firewall front for iptables.
