i have the problem: VE NOT rebooting. i checked:

1. vz is present in crond.d
2. /usr/share/vzctl/scripts/vpsreboot scripts is present
3. crond is running
#service crond status
crond (pid 24765 8579) is running...
3. when rebooting a VE the following files are created:
reboot
halt

running on CentOS 4.5 with latest OpenVZ kernel. teplate is the default CentOS 4.5 with additions yum, mysql*, php*, and removed cups, samba

thanks in advance
