---

i just attempted nx install into a CentOS 4.5 VPS

```
# nxserver --useradd root
```

```
NX> 100 NXSERVER - Version 1.5.0-60 OS (GPL)
```

```
NX> 1000 NXNODE - Version 1.5.0-60 OS (GPL)
```

```
cat: /etc/nxserver/users.id_dsa.pub: No such file or directory
```

```
cat: /etc/nxserver/users.id_dsa.pub: No such file or directory
```

```
NX> 716 Public key added to: /root/.ssh/authorized_keys2
```

```
NX> 1001 Bye.
```

```
NX> 999 Bye
```

is failing to create the client key because of a missing public key
