I'm having trouble getting OpenVZ going on a Centos 5 install.

```
 yum install vzpkg
Loading "installonlyn" plugin
Setting up Install Process
Setting up repositories
Reading repository metadata in from local files
Excluding Packages in global exclude list
Finished
Parsing package install arguments
Resolving Dependencies
--> Populating transaction set with selected packages. Please wait.
---> Package vzpkg.noarch 0:2.7.0-18 set to be updated
--> Running transaction check
--> Processing Dependency: vzyum >= 2.4.0-5 for package: vzpkg
--> Restarting Dependency Resolution with new changes.
--> Populating transaction set with selected packages. Please wait.
---> Package vzyum.noarch 0:2.4.0-11 set to be updated
--> Running transaction check
--> Processing Dependency: cElementTree.so for package: vzyum
--> Finished Dependency Resolution
Error: Missing Dependency: cElementTree.so is needed by package vzyum
```

But cElementTree.so is already provided by python-elementtree.x86_64 which is already installed.

```
python-elementtree.x86_64               1.2.6-5                 installed
Matched from:
/usr/lib64/python2.4/site-packages/cElementTree.so
cElementTree.so()(64bit)
```

Thanks for any pointers!
