Hi , I get the following Known error on 028stab039 kernel
but http://wiki.openvz.org/Migration_fails#Problem_.232
states that this is fixed in 028stab035 or newer kernels
Of course if i disable udev in the VE checkpointing works ok.
But i would realy like to use udev in the VE.
Live migrating VE
Suspending VE
Setting up checkpoint...
suspend...
Can not suspend VE: Device or resource busy
file on unsupported FS: magic 0bad1dea
Checkpointing failed
Error: Failed to suspend VE

Thanks
Alex
