argh that patches conflicts with the user namespace patchset and the patch
from kirill changing namespace to mnt_namespace.

I'm maintaining a patchset on 2.6.18-rc5-mm1 with the following input.

* kthread conversion patches not yet accepted by maintainers
* ro bind mount, from dave
* user beancounter, from kirill and pavel
* network namespace, from andrey
* some extra stuff from daniel (in progress)
* mnt namespace, from kirill
* pid namespace, from suka.
* user namespace, from cedric

the last 3 patches conflicts because of nsproxy. I'm going to merge them
all, and resend on the list for inclusion in -mm.

thanks,

C.
