argh that patches conflicts with the user namespace patchset and the patch from kirill changing namespace to mnt\_namespace.

I'm maintaining a patchset on 2.6.18-rc5-mm1 with the following input.

- \* kthread conversion patches not yet accepted by maintainers
- \* ro bind mount, from dave
- \* user beancounter, from kirill and pavel
- \* network namespace, from andrey
- \* some extra stuff from daniel (in progress)
- \* mnt namespace, from kirill
- \* pid namespace, from suka.
- \* user namespace, from cedric

the last 3 patches conflicts because of nsproxy. I'm going to merge them all, and resend on the list for inclusion in -mm.

thanks,

C.
