hi
i installed openvpn on an ve,but i seems having problem!!

when user's connecting to web via the VPn their system sending the request with main server ip!!
please note requests not with vps main ip
it will sending request with main server ip

for example when you go to www.ip2location.com at the middle of the page it show your ip,but when the vpn user go ing to this site this show the original ip of server....

do you know how can i fix this?!
thanks

P.S:i asked this from open vpn support and thay said this is a part of VE settings.
