Hi,

Sorry this not "I can't" but "i don't know"

I find this commande for allocate 128Mo  
page =  $128 * 1024 * 1024 / 4096$  ---> 32768

vzctl set 102 --privvmpages 32768:32768 --oomguarpages 32768:32768 --physpages 32768:32768 --vmguarpages 32768:32768 --save

And this for the memory information on the VE  
vzctl set 102 --meminfo pages:32768 --save

But on the VE, swap memory as zero

102:~# free

	total	used	free	shared	buffers	cached
Mem:	65536	13300	52236	0	0	0
-/+ buffers/cache:		13300	52236			
Swap:	0	0	0			

How to allocate swap file?
