Subject: Unable to start VPS on Debian Etch

I am unable to start a VPs under a Debian Etch host. I can't find any useful message as to why it's failing to start the VPS on /var/log/vzctl.log.

The machine is a dual quad-core Xeon (Intel(R) Xeon(R) CPU E5345 @ 2.33GHz). I used the debian-4.0-i386-minimal.tar.gz template from openvz.org to create the VE.

Here's what I get when I try to start the VE:

michael:/etc/vz# vzctl --verbose start 101
Unable to open /usr/lib/vzctl/modules/: No such file or directory
Starting VPS ...
Mounting root: /srv/vz/root/101 /srv/vz/private/101
VPS is mounted
VPS start failed
Running: /usr/sbin/vzquota stat 101 -f
VPS is unmounted

Kernel:

Linux michael 2.6.18-openvz-13-39.1d1-amd64 #1 SMP Sat Sep 29 15:02:55 MSD 2007 x86_64 GNU/Linux

And here are the VZ modules I have loaded. /etc/init.d/vz has been started successfully:

michael:/etc/vz# lsmod | grep vz
vznetdev 26752 1
vzethdev 17040 0
vzrst 129832 0
ip_nat 24720 1 vzrst
vzcpt 109368 0
ip_conntrack 72596 3 vzrst,ip_nat,vzcpt
vzdquota 47464 0 [permanent]
vzmon 50448 4 vznetdev,vzethdev,vzrst,vzcpt
vzdev 8456 4 vznetdev,vzethdev,vzdquota,vzmon
ipv6 298208 29 vzrst,vzcpt,vzmon

I don't know what else to look for. Any help would be greatly appreciated.

Thanks in advance,

-Roberto
