Hi,

I am trying to install openvz on sles 10 x86_64.
I got the kernel installed: 2.6.16-027test011-0.12-ovz

vzquota-3.0.11-1
vzrpm44-python-4.4.1-22.5
kernel-ovz-2.6.16.46_027test011-0.12
vzctl-lib-3.0.18-1
vzrpm44-4.4.1-22.5
vzrpm43-4.3.3-7_nonptl.6
vzctl-3.0.18-1
vzpkg-2.7.0-18

well, I need the vzyum rpm too.

http://www.python.org/pyvault/SRPMS/repodata/repoview/rpm-python-0-4.4.2.4-1.html

rpm -Uhv vzyum-2.4.0-11.noarch.rpm
warning: vzyum-2.4.0-11.noarch.rpm: Header V3 DSA signature: NOKEY, key ID
a7a1d4b6
error: Failed dependencies:
    cElementTree.so is needed by vzyum-2.4.0-11.noarch
    urlgrabber is needed by vzyum-2.4.0-11.noarch

but I have found a python-elementtree-1.2.6-25.1.x86_64.rpm installed, and I
have python-urlgrabber, here:
http://download.opensuse.org/repositories/home:/cthiel1/SLE_10/i586/
Nevertheless, anybody has an idea where I can find these missing rpm
packages?

In case I do not need them, I installed vzyum --nodeps
and I downloaded the opensuse-10-x86_64-default.tar.gz from
http://download.openvz.org/template/precreated/, and put it
into /vz/templates/cache.

but vzpkgls just shows me one empty line, the same with vzpkgls -c

is this because of the missing rpm? or did I sth. wrong?
any hint is very welcome.

kind regards
Sebastian
