Hi,

I'm new to OpenVZ. I'm interested in making a tool which can give performance statistics for OpenVZ, which can help users to get details about CPU usage, Memory usage etc for each VE.

For this task one file which can act as source is /proc/vz/vzstat. Can somebody guide me on which all performance information, the user or performance analyzer might want know. It would be great if somebody can also point out other user information tools which are required to be developed for OpenVZ.

Thanks in advance...

With regards,
Khyati
