man and search your best friends. Laziness - not.

```
# vzctl --help | grep iptables  
  [--iptables <name>] [--disabled <yes|no>]
```

From vzctl man page:

Iptables control parameters

--iptables name

Restrict access to iptables modules inside a VE (by default all iptables modules that are loaded in the host system are accessible inside a VE).

You can use the following values for name: iptable_filter, iptable_mangle, ipt_limit, ipt_multiport, ipt_tos, ipt_TOS, ipt_REJECT, ipt_TCPMSS, ipt_tcpmss, ipt_ttl, ipt_LOG, ipt_length, ip_conntrack, ip_conntrack_ftp, ip_conntrack_irc, ipt_conntrack, ipt_state, ipt_helper, iptable_nat, ip_nat_ftp, ip_nat_irc, ipt_REDIRECT, xt_mac.

Please, be assured, that all necessary iptables modules are loaded before the start of vps
