Valmont wrote on Wed, 31 October 2007 12:27 certainly, you can add iptable\_nat into  
/etc/vz/vz.conf &&  
service vz restart.

It should work too, but I didn't try it

It Does !! - or actually I know it works if all the iptables parameters from you vzctl ... --iptables  
command is moved top vz.conf . The conntrack parameters was allso missing.

Thanks a lot. Maybe the docs should be change, so the paragraph stating that "by default all  
iptables modules that are loaded in the host system are accessible inside a VE" is changed to a  
reference to the vz.conf file.

That was the point that got me off the track.

I know I haven't modified my vz.conf, so i mistakensly believed i could reley on default settings.

Thanks again.

/Thomas
