Sorry guys to reopen this topic but I had the same problem.

Compiling zaptel on HN and VE was a success, but issuing modprobe on VE yields:

```
idra / # modprobe -v ztdummy
insmod /lib/modules/2.6.18-028stab027/misc/zaptel.ko
WARNING: Error inserting zaptel (/lib/modules/2.6.18-028stab027/misc/zaptel.ko): Operation not
permitted
insmod /lib/modules/2.6.18-028stab027/misc/ztdummy.ko
FATAL: Error inserting ztdummy (/lib/modules/2.6.18-028stab027/misc/ztdummy.ko): Operation
not permitted
```

The VE is a Gentoo system with kernel version 2.6.18-028stab027.

Any help is appreciable!
