Hi,  
I am sorry to push up that thread again, but:  
I really need a clue how to get this working!  
I really need the Live-Migration for a Linux-  
Terminal-Server-Project like setup.  
Is there somebody out there using the Live-  
Migration feature of OpenVZ, if so  
how do you share the private Areas of the VEs?

Has somebody a clue on where to look at to solve  
the NFS Problem? I am not afraid of code...

Thanks again, Moritz
