Subject: Adding Swap space to VE

hi,

when i look in the VE for memory/swap space i get XXX kb Memory (like i defined it in the config) and 0 kb in swap space.

Now i guess when i run out of XXX kb Memory the applications on ve will get a memory error.

I couldn't find any hint how to add common swap space to a ve.

Is this any possible ?

I want to be sure that the applications will work, also when the physically assigned memory ran out.

Greetings
Oliver
