Dietmar Maurer wrote on Wed, 05 December 2007 09:37Sure, so it is enough to assign all VEs the same value, for example:

CPUUNITS=1000

but vzsplit generate value depending on 'n' - why ?
If the node is not overcommitted CPULIMITS can be recalculated to MHz. Some users preferes to see CPU guarantee in MHz rather in abstract "shares of node's CPU".

You can find this formula in vzsplit sources.

thank you,
Vasily Averin
