Subject: capturing init output

Hi all,

here is an init wrapper to capture the output from init. It uses a named pipe, and an additional logging process to read that named pipe and writes it into a file.

(sysvinit uses open without O_APPEND, so setting CONSOLE=filename will never
work)

compile with:
> gcc -O2 -Wall -lc vzinit.c -o vzinit

Copy it into the VE:
> mv VPSDIR/sbin/init VPSDIR/sbin/init.org
> cp vzinit VPSDIR/sbin/init

the start the VE:

> vzctl start 777
> tail -100f VPSDIR/var/log/init.log

What do you think? Should I write a patch to vzctl, or is there a better way to do it?

- Dietmar
