before applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	16220	9908	6312	0	857	7718

+/+ buffers/cache: 1332 14887

Swap: 32735 0 32735

after applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	256	141	114	0	0	0

+/+ buffers/cache: 141 114

Swap: 0 0 0

i like the idea of this.... but why does swap/buffers/cached usage zero out?

i guess the beancounters don't keep those stats seperate?
