I think restarting vz did it. Argh... Thank you for ALL of your help with this. I only wish I had tried restarting vz or even rebooting earlier.

I restarted vz using 'service vz restart' and then executed:

```
ifconfig venet0 down
```

```
ifconfig venet0 up
```

```
ifconfig venet0 0
```

I know those were probably unnecessary. By the way, the kernel I am using is from the ovz yum mirrors.

```
[openvz-kernel-rhel4]
```

```
name=OpenVZ RHEL4-based kernel
```

```
#baseurl= http://download.openvz.org/kernel/branches/rhel4-2.6.9/current/
```

```
mirrorlist=http://download.openvz.org/kernel/mirrors-rhel4-2.6.9
```

```
enabled=1
```

```
gpgcheck=1
```

```
gpgkey=http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

```
[openvz-kernel-2.6.8]
```

```
name=OpenVZ 2.6.8 kernel
```

```
