I use kernel 2.6.16.1 patched with patch-026test007-combined.gz from openvz.org.

How do I activate connection tracking?  
Does loading the kernel module ip\_conntrack suffice?

The host system is Debian Sarge/Etch. The VPS node is build via the template  
debian-3.1-i386-minimal.tar.gz.

Ciao, akw
