Hi,

1. Please check that in output of command 'arp -n' (on HN) there is an ip of your VPS.
 2. Conduct this experiment:
 - On HN: 'tcpdump -n host <YOUR_VE_ID>' then
 - Enter inside VE and try to ping any host
 - Please provide us with the output of tcpdump from HN.
 3. And also 'vzctl --version' on HN
 4. What kernel do you use?
-
