Subject: Oracle 10g wants swap

Hi all!

I tried to install Oracle 10G Express on debian under my VM.
It requires 1Gb swap
This system does not meet the minimum requirements for swap space. Based on the amount of physical memory available on the system, Oracle Database 10g Express Edition requires 1006 MB of swap space. This system has 0 MB of swap space. Configure more swap space on the system and retry the installation.
But i can't create swap under my VM.

In http://forum.openvz.org/index.php?t=msg&goto=420& topic somebody told, that "Swap is a non problem, it just complains about it but it does not matter." but i really confused. It doesn't want to install.

Have anybody any useful suggestions?

P.S.
There're good manuals for oracle installing:
http://www.oracle.com/technology/tech/linux/install/xe-on-ku buntu.html
http://www.debianhelp.co.uk/oracle.htm
But there are no description how to override swap requirement.
