Hi All,

I noticed if I shutdown network interface (ETH0) via the Hardware Node and later bring it back up the VPS remain down or does not respond - I have to restart the VPS. I just wanted to know if that is normal?

Status of all VPS are in running mode but does not respond to pings. Note: For no particular reason, I had just shutdown eth0 overnight and in morning I enabled it BUT as mentioned the VPSes seem to remain down.

Joe
