Hi dev, thanks for your great help, but i didnt have ANY choice but to remove it, this is fully used Production systems with 5 VPs's runing.

I wanted to git rid of vmware, but VMware gsx is very relaible.

all i can tell, is that i did:

`vzsplit -n 5 -f 5`

and created the Virtual Machined with `vzctl --config 5` option.

everything worked great, but suddenly - it even kills SSHD on the Host node!!
