Hi

During Debian packaging process I checked the package using lintian
which is a tool that makes some static checks against a package.

It would be good if the upstream software installation could fix
this for me. :)

Simply remove the executable bit from the following files when installing:

W: vzctl: executable-not-elf-or-script ./etc/sysconfig/vz-scripts/dists/centos-3.conf
N:
N: This executable file is not an ELF format binary, and does not start
N: with the #! sequence that marks interpreted scripts. It might be a sh
N: script that fails to name /bin/sh as its shell.
N:
N: Refer to Policy Manual, section 10.4 for details.
N:
W: vzctl: executable-not-elf-or-script ./etc/sysconfig/vz-scripts/dists/rhel-4.conf
W: vzctl: executable-not-elf-or-script ./etc/sysconfig/vz-scripts/dists/suse-8.0.conf
