example: 4GB quota for VPS 100

Remember that disk quota block size for OpenVZ is 1024 Bytes

```
vzctl set 100 --diskspace 4194304:4718592  
(VPS 100 softlimit 4G, hardlimit 4.5G)
```

```
vzctl set 100 --quotatime 86400  
(VPS 100 can exceed the softlimit for 1 day)
```

Look at the user guide again it's very good and explaining how quotas are used in OpenVZ.

Thank you for the great explanation. What happens if the VE, in this example, use more than 4GB for more than 1 day (say 2 days)? Will it crash? Or what will happen?
