Hello,

1. What about CONFIG\_UBC\_KEEP\_UNUSED option? What kernel do you use?
  2. After you've stopped your VE what column in /proc/user\_beancounters [your VE statistics] is not zero.
  2. You can compile kernel with CONFIG\_UBC\_DEBUG, CONFIG\_UBC\_DEBUG\_KMEM options and then check some debug information in /proc/bc/VEID/ directory after your VE has stopped.
