Hi,

only source based routing can help you.

Instead of making new rules you can do it by adding appropriate routes:

```
ip ro add 10.200.3.0/24 dev venet0 src 10.200.3.100
```

```
ip ro add 10.200.4.0/24 dev venet0 src 10.200.4.100
```

Then if you want you can add this command inside appropriate init script (for example /etc/rc.local) to add routes automatically.
