Subject: masquerade errors on openvz

Trying to run the below on open vz always errors,

iptables -t nat -A POSTROUTING -p tcp -m tcp -o tun0 -j MASQUERADE
iptables: Unknown error 4294967295

However, if we dont use masquerade it works. We've lost a couple clients over this so would appreciate any pointers from users that can actually get this command to work on their boxes ...

VPS are normally using centOS 5
