Subject: Same NFS export in multiple VEs with different mount options

I've been trying to mount an exported NFS share in several VEs but with different mount options(ro and rw in my case). For example, VE 1 tries to mount the share with ro, that works fine. But when VE 2 tries to mount the share in rw it'll get mounted with ro. It's the same vice versa(mounting it rw first and trying to mount it ro).

Any tips? Just wanted to double check that I've haven't missed anything before bug reporting it.

ps: I'm not subscribed to the list.
