Hi

Im having problems with a specific software: Plesk + Openads . I have 2 plesk runnings in separately VEs without any trouble. I have third container with Openads software installed, a openads frontweb, not a bd. Well, when the container start to receip some traffic the container stop to response. I don't know if is a problem with setup or something. I found this error in HN

Dropped packet, source wrong veid=1 src-IP=<ip container> dst-IP=83.50.166.85

when the VE fall. The other two Plesk are running perfectly but when i send some real traffic to third Ve with openads, it stops after some minutes.

Can I do some test or something to resolve it?

Thanks.
