Afternoon all.

This is my first time posting to this list. I've just started using openvz for our company's main server.

Unfortunately the Centos-5 template that I've been using from the repos has an issue whereby when I do a yum update.. it can upgrade fine. However when I issue a - [yum groupinstall "Development Tools"] comamnd, the final output is [Erased: vzdev].

This is not a good sign, and I've tried the solutions posted on the following thread:

http://forum.openvz.org/index.php?t=msg&goto=12878&

Could someone let me know what the best way forward is. I'd like to continue using the centrally provided templates if that's an option.

Hopefully someone has had the same issue and can provide me with help.

Regards,

andylockran
