Hi,

what about this ways (unfortunately I haven't tried them )

1. Using venet it's impossible to assign the same IP addresses to your VEs. But your can assign IP address you want to share to your HN, assign any different IP addresses to your VEs and then for example via iptables distribute the traffic.

2. Using veth try to assign the IP address you want to share to your VEs and then set appropriate iptables rules on the HN to sort the traffic.
