Please pull from

git://git.openvz.org/pub/ubuntu-hardy-openvz openvz

to receive fixes back-ported from stable 028stab053 kernel branch.

The fixes summary is:
* CPT crashes when some restoring to already running Container
* OOPS when CPT failed to dump netfilter information
* Various restore problems on non-standard setups
* OpenVZ /proc entries nlink discrepancies and wrong permissions
* Beancounters leaks and deadlocks in net buffers accounting
* IPv6 dst entries leaks, leading to freeze on Container stop
