That is right, you need to modify `%_install_langs` in `.rpmmacros` file, and run `vzpkgcache -f <affected_templates>` after that. In your existing VEs the only way to add more locales is to reinstall all the affecting packages.

`%_install_langs` can look like this:

`%_install_langs C:pl_PL:en_GB:en_US:de_DE:pl:en:de`
