Hi Guys, before I get started, big congrats on OpenVZ , I think it is a great product!

If you read this, not as a developer but as a helper, thanks as well because you have also contributed by helping others and that is a vital part.

Right, now for my problem.

I am running Ubuntu Hardy Heron (8.04) PowerPC (32-bit) and I am trying to to install OpenVZ

I have gathered that there are no pre-built kernels for PowerPC, and that I need to compile my own, however I am finding it very difficult.

If anyone could help me, I would appreciate it a lot.

thanks

NOTE: I am open in switching to another Distribution if that would make it easier
