Hi,

Trying openvz for the first time on a 64 bit Centos5 box

The kernel is installed, but the tools are giving me trouble

[root@main 2]# rpm -Uvh *.rpm
warning: libvzctl-0_0_2-3.0.22.1-1.1.x86_64.rpm: Header V3 DSA signature: NOKEY, key ID d673da6c
error: Failed dependencies:
    rpmlib(PayloadIsLzma) <= 4.4.2-1 is needed by libvzctl-0_0_2-3.0.22.1-1.1.x86_64
    vzctl-lib = 3.0.22-1 is needed by vzctl-3.0.22-1.x86_64
    cElementTree.so is needed by vzyum-2.4.0-11.noarch

ls -alh *

libvzctl-0_0_2-3.0.22.1-1.1.x86_64.rpm
vzctl-3.0.22-1.x86_64.rpm
vzpkg-2.7.0-18.noarch.rpm
vzquota-3.0.11-1.x86_64.rpm
vzyum-2.4.0-11.noarch.rpm

If anyone could point me in the right direction, i would appriciate it.

thanks
