Subject: reboot inside vps

I'm using ubuntu 8.04 with kernel 2.6.24-19-openvz
I created 3 vps's (centos5, ubuntu 8.04 & debian 4) all 64 bit flavours.

When I enter "reboot" or "restart" in the vps, it stops like it should, but doens't start itself anymore.

Is there a way to make this work ?
Or do I always have to use "vzctl start vid" to start it up again ?
